

Waste Management Software Product Suite

Waste.IT is a fully integrated waste management software suite designed to allow you to take full operational control of your company.

The software modules included are;

- Skip.IT
- Plant.IT
- Tip.IT
- Weigh.IT

We are proud that our waste solutions are at the heart of companies from skip hire, plant hire, tipper hire to full multi-site waste management organisations.

Our Waste Software does:

- Cash flow management: Instant invoicing facilities, seamless accounts links with customer credit status.
- Cost reduction: Improves staff efficiency e.g. by allowing quick order entry.

- Deliver on time: System will flag when job is due / overdue, mapping software option.
- Display instant availability of resources: Give accurate decisions to customers with a click of a button, all resources displayed on screen.
- Share information: With integrated systems that share data across your company.

At Bowe Digitl:access Ltd our goal is to streamline internal operations, helping businesses run at optimum efficiency and profitability. Waste.IT is designed to put you in total control of your business systems.

Waste.IT management system although fully integrated, can be purchased and used on a modular basis.

we make IT happen

Plant.IT

Designed and written by Bowe Digitl:access Ltd, our plant hire management software will give you total control over your day-to-day operations, with it's full job costing, profitability reporting, subcontractor facilities and full rental history features - a powerful management tool to help run your business more effectively.

Our Plant.IT software has been designed in conjunction with our existing waste management customers, who wanted a fast, reliable, cost effective and easy-to-use software solution for their Plant Hire divisions.

Plant.IT is used to collect and maintain orders for the hire of plant equipment. Additional equipment may be hired as part of the contract, including operators' time. Full timesheet entry and additional charges can be broken down on your customer invoice.

Plant.IT shows at a glance what equipment is booked to which customer and if operator time sheets have been entered. The system has facilities to monitor jobs and generate invoices. As with all modules in the suite, invoices can be posted seamlessly into your accounts.

A full history is kept of plant equipment whereabouts, and subcontracted equipment allocated to jobs.

Questions and Answers

Q. Can the software be run at multiple sites?

A. Yes - VPN's or Terminal Sessions can be used to run all products at as many sites as required.

Q. What support is available on these products?

A. Bowe Digitl:access Ltd can provide annual software support agreements that include full telephone/remote support and software updates.

Q. What platform do these products run on?

A. All products have a Microsoft SQL database and are designed and developed using the Microsoft .net framework.

Q. Can the programs be tailored to our individual requirements.

A. Yes - we can develop add-ons to all our products.

we make IT happen

Skip.IT

Skip.IT is a fully integrated software package designed and produced by Bowe Digitl:access Ltd. covering all aspects of your skip hire operation - a powerful management tool to help run your business more effectively.

Originally designed for local waste management companies, we are delighted to offer Skip.IT to the rest of the skip hire industry.

As you would expect from leading software designers, Skip.IT is a versatile, easy to use, yet powerful application.

The package includes:

- Advance or immediate booking of deliveries, collections, exchanges and tip & returns
- See estimated skip availability whilst booking
- Very flexible price structures, with banding
- Comprehensive additional charges and payments
- Clear visibility, status and alerts for Pending Jobs
- Filtering and sorting of pending jobs
- Driver scheduling
- Tracking of job progress
- Cash collections and reconciliation report
- On-site jobs with comprehensive searches
- Full on-site job details
- Click on an on-site job to arrange collection, exchange or tip & return
- Locate and chase skips e.g. by skip type and expected due date
- To-do screen for ad-hoc reminders

An optional link to your accounts software is available. Integrated Post code and mapping facilities can also be provided.

Questions and Answers

Q. Can Skip.IT track all skip containers and report on location at any time?

A. Yes - if skip id's are used then full tracability is available with reports.

Q. Does Skip.IT link directly to Weigh.IT?

A. Yes - when internal skips/containers are weighed the skip job may be selected and the weight is updated on the job and marked for attention.

Q. Can the software be run at multiple sites?

A. Yes - VPN's or Terminal Sessions can be used to run all products at as many sites as required.

Q. What support is available on these products?

A. Bowe Digitl:access Ltd can provide annual software support agreements that include full telephone / remote support and software updates.

Q. What platform do these products run on?

A. All products have a Microsoft SQL database and are designed and developed using the Microsoft .net framework.

Q. Can the programs be tailored to our individual requirements.

A. Yes - we can develop add-ons to all our products.

we make IT happen

Tip.IT

Designed and written by Bowe Digitl:access Ltd, our Tipper management software will give you total control over your day-to-day operations, with it's full job costing, profitability reporting, subcontractor facilities and full rental history features - a powerful management tool to help run your business more effectively.

Tip.IT has been developed for companies that operate tipper vehicles, take orders for vehicles required for jobs, allocate vehicles and drivers then monitor drivers' times and loads delivered and collected. A flexible price matrix is provided for pricing by customer, by customer sites, by material prices per load, per tonne, with maximum and minimum charges etc.

Orders for vehicles are taken quickly and easily, and your own drivers allocated, alternatively the job can be subcontracted.

A full history is stored, giving you the facility to review vehicle &/or driver deliveries and collections of materials on any given day.

Timesheets, ticket numbers and weighbridge ticket numbers are entered for full invoicing details. This process ensures that invoicing can be done quickly and efficiently saving days of manual cross referencing and invoicing.

Weigh.IT

Designed and written by Bowe Digitl:access Ltd, our Weighbridge management software will give you total control over contract, ex-works, public weighing and tares, monitoring contracts and day-to-day operations - a powerful management tool to help run your business more effectively.

Our software is a versatile, yet easy to use state of the art weighbridge system ensuring that this is the most efficient and cost effective piece of software you'll ever purchase!

Weigh.IT has weighbridge links to ensure accuracy, and is designed to cope with all aspects of weighbridge activity. From input and movement of waste, to the sale of recycled, quarried or purchased goods. Designed to cope with the most demanding environments the system complies with all relevant legislation, from landfill tax to aggregate tax and VAT. Full reporting facilities are provided including customer analysis and assistance with tax calculation.

The invoicing module offers the most flexible facilities available, invoicing per job, date, customer, site or any combination of the above. Weigh.IT fully integrates with our other products and accounts making the total Waste.IT solution. Links to your accounting software are available, to see at a glance if the customer is over credit or on hold before taking an order, and the invoice can be posted direct to the accounts with full nominal analysis. Post code and mapping facilities can also be provided.

Questions and Answers

- Q. What type of bridge can be used with Weigh.IT?
- A. Weigh.IT can integrate with all makes and modules that can supply a serial connection.
- Q. Can Weigh.IT handle multiple waste and product pricing?

Company Overview

Harnessed correctly, IT can lead to huge efficiency savings and bring immense added value to your business, but IT can also be a real headache. That's why it's important to choose wisely when sourcing an IT partner to take your business to the next level.

Bowe Digitl:access Ltd offers the optimum in quality computer products and services and the highest levels of customer care, from facilities located in the heart of the stunning Northumberland countryside.

As a North East Sage developer, specialising in the provision and installation of accounting and manufacturing software, Bowe Digitl:access Ltd takes pride in providing effective IT solutions tailored to your precise needs.

Bowe Digitl:access Ltd can supply and install any hardware, software and peripheral equipment your business might require - from a simple PC workstation to complex Wide Area Networks. You can be provided with tailored training and continued support from experienced IT professionals who are committed to ensuring that you enjoy optimum benefit from your investment.

The primary objective at Bowe Digitl:access Ltd is to provide you, the customer, with a service that will help you to improve the efficiency and competitiveness of your business.

In a nutshell, Bowe Digitl:access Ltd can help you to stay productive, stay competitive and stay ahead of the game.

Bowe Digitl:access Ltd has successfully developed software packages for organisations across a range of industry sectors including Waste Management and Bakeries.

Waste.IT is a fully integrated waste management software suite designed to allow waste management clients to take full operational control of their company.

Drawing on its manufacturing experience, the Bakery and Production System, 'BaPS', provides fast track order processing and production. Designed in conjunction with the bakery industry, this is also applicable to other sectors, including wholesale and retail environments where fast orders and/or production are an essential requirement.

Bowe Digitl:access Ltd also offers general e-commerce and internet solutions, and a full range of hardware and networking requirements for its clients.

How could you benefit from talking to a company that listens to your needs and makes sure that the solution revolves around your business requirements?
